Fusion Excel Connect: Easy and intuitive data entry into Sage

Enable your users to create and edit data in the familiar spreadsheets they use every day. Fusion Excel Connect from Datel takes a **fresh look at data entry** into Sage 200cloud, Sage 1000 and Sage X3. It makes the routine entry of account data, sales orders, purchases and stock **quick and efficient**.

Fusion Excel Connect allows users, especially those in finance, to manipulate their data first in the **familiar environment** of Microsoft Excel and then post it directly into Sage **without any rekeying**.

Instant feedback indicates whether this has been done correctly, enabling users who are not necessarily experienced in Sage the ability to **confidently enter data** into the system. Users can also browse data from Sage, such as nominal codes, costs centres and departments, and select and **drop it into Microsoft Excel**.

Administrator-defined mappings

Administrators are able to control what users can see and do in an easy to use environment. They are responsible for creating the sheet, selecting a range of cells in Microsoft Excel and associating them with fields in Sage.

Fusion Excel Connect has the intelligence to validate the design to ensure the correct fields have been mapped before it is published to users. Administrators can also define browses to live Sage data and create their own fixed lists of values, restricting what users can browse on. So for example, users can be limited to certain VAT codes, cost centres or a range of nominal codes.

Supporting remote working

Users needing to work away from the office can synchronise all browses into a sheet and build journals offline, saving them to the local machine, ready for posting back into Sage once the user is reconnected to the network.

A modular approach

Fusion Excel Connect is modular: purchase only the sheets that you need now, and if you wish add more over time.

Plug-ins Available

A large variety of plug-ins are available for Sage 200cloud, Sage 1000 and Sage X3. Including:

For Sage 200cloud

- ▶ General Ledger journal
- ▶ Cash receipts
- ▶ Cash payments
